

How is the decision taken regarding whether a sample is classified as 'core' or 'non-core'?

You are here

[EDQM FAQs](#) / [EDQM FAQs in English](#) / [HEALTHCARE](#) / [Blood transfusion](#) / [Blood Proficiency Testing Scheme \(B-PTS\)](#) / [Specific information related to the results and the statistical analysis of a B-PTS study](#) / [Preliminary and final report](#) / How is the decision taken regarding whether a sample is classified as 'core' or 'non-core'?

This decision is based on the concentration of the marker to be tested, the data obtained in previous B-PTS studies and the regulatory requirements (e.g. CTS requirements/IVD regulation). The final classification as core or non-core is confirmed based on the results obtained during pre-distribution testing.
