[EDQM FAQs](#) / [EDQM FAQs in English](#) / [EUROPEAN PHARMACOPOEIA & INTERNATIONAL HARMONISATION](#) / [General Chapters and Monographs](#) / [GENERAL CHAPTER 2.2.46 \(11.0\)](#) / [SYSTEM SENSITIVITY](#) / How is the S/N ratio calculated?

The calculation of the S/N is based on the range of the noise in a chromatogram obtained after injection of a blank, observed over a distance at least equal to **5 times** the width at half-height of the peak ($5 \times W_h$) in the chromatogram obtained with the reference solution.
